

Acknowledgements

There are several people without whom this thesis would not have been at all possible and whom I need to thank:

- Professor Marc. D. Hauser, my advisor, has endlessly and tirelessly mentored, taught and encouraged me since the fall of my freshman year when I took Science-B29. I appreciate his many useful comments on this work, but even more so, I appreciate his advice, comments, and willingness to discuss any questions or ideas that I have had. I know of no advisor as dedicated and committed to his students.
- Laurie Santos took me to Puerto Rico nearly two years ago to begin the research in this thesis. She trained me on running these experiments, helped me design them, read multiple drafts of this entire document, and helped put it all together in the end. I owe her a big one for all this. I owe her a thank you as well though, perhaps, bigger, for introducing me to Medalla, Pina Coladas, Winston's, Cayo Team 2k, and, in general, "The Punta Way."
- I would like to thank Justin Junge for helping me run all the experiments, code them, and for helping me live the good life, in Cambridge and in Cayo. If I'd have known it was gonna be this kind of party....
- The rest of the Cayo Crew – Gustavo, Zoe, Virginia, Pat, and Cory – also deserve a big thank you for living the good life with Justin and me.
- Many thanks as well for the generous support of the Harvard College Research Program, and the Mind, Brain, and Behavior Summer Thesis Grant.
- I need to thank my readers, Professors Susan Carey and Naomi Pierce, for their helpful comments throughout this process.
- My roommates and friends, Alex, Emily, Amber, Sasha, Ben, Pacho, Andy, Joe, Ben, and David, for putting up with too many stories about monkeys.
- Last but not least, I would like to thank my family, and especially my brother and sister, for always supporting me, while reminding me to have a sense of humor about my work.
