

Acknowledgments

Completing a research project that allows for a high level of intellectual freedom combined with a generous amount of advice from the most knowledgeable and supportive of teachers is a rare experience indeed, and has been one of the most rewarding of my academic career. The following individuals made this amazing experience possible. Thanks to:

Marc Hauser –

Not only did Marc take on my project on when he already had more than a full advising schedule, he was always free for advice and support whenever it was needed. Our conversations were always invigorating and illuminating, especially when the topics turned to the practice of science and rigorous thought. Thanks for being such a wonderful advisor!

Patty Deldin –

Truly, without Patty's help this project would never have been able to happen. I'm very grateful for the large amounts of her personal time that she put into getting this project off the ground and for her continued tireless efforts since it has been underway.

Alfonso Caramazza –

Alfonso's sharp eye for scientific argument was a key ingredient in improving the ideas that went into this thesis, and I very much value his support during the very earliest phases of the thought process going into this thesis.

Dan Simons –

Because of Dan's propensity for fostering creative scientific thought, many of the ideas I've had over the past four years I've run past Dan at some time or other, and it's my hope that perhaps some of his creativity is reflected in this thesis.

The Harvard College Research Program –

Thanks very much to HCRP for supporting undergraduate research in general, and especially for helping me with my thesis, even when the amount of funding turned out to be a bit larger than expected!

William McMullen –

Thanks in no small part to William McMullen's efforts, software was able to be obtained, and techniques were able to be learned in order to use the tools provided by Biopac Systems.

The Harvard Psychology Department –

Thanks to a senior thesis research grant from the psychology department, the project was able to get started.
